

FATEN MOHAMMED ALDAWOOD

AI & Cloud Engineer | Google Cloud | Python & API Development

Riyadh, Saudi Arabia | +966 53 322 5690 | f.eng.aldawood@gmail.com | [GitHub](#) | [LinkedIn](#)

PROFESSIONAL SUMMARY

Computer Science graduate with hands-on experience building cloud-native applications, REST APIs, and data-driven solutions. Currently developing practical Google Cloud skills through a professional cloud software development bootcamp, with experience using Python, Flask, FastAPI, Redis, Docker, Cloud Run concepts, API integration, and event-driven/cloud architecture. Strong foundation in backend development, microservices, databases, Git, and application observability.

CLOUD & API PROJECTS

Cloud Catch - Redis Multiplayer Cloud Game

Google Cloud / Redis

- Built a real-time classroom multiplayer web application using Python, Flask, Redis, HTML/CSS/JavaScript, and REST-style endpoints.
- Implemented player registration, live lobby updates through API polling, game-state management in Redis, QR-code joining, host controls, and lobby reset functionality.
- Designed Redis keys and data structures for shared application state and prepared the application for containerized/cloud deployment using Docker and Gunicorn.
- Applied cloud concepts including managed Redis/Memorystore, connection pooling, internal networking, ingress, and scalable stateless application design.

API Sentinel - API Monitoring Tool

API Project

- Developing an API monitoring tool to check endpoint availability, response status, latency, and service health through automated HTTP requests.
- Designed the project around reusable API checks, structured health results, and monitoring workflows suitable for cloud-hosted services and microservice environments.

RASID - Bilingual Advertisement Safety Engine

FastAPI / AI

- Developed Arabic-English backend services that classify online advertisements as Safe, Manipulative, or Fraud using NLP, OCR, and computer-vision components.
- Built REST APIs with FastAPI to connect the classification pipeline, browser extension, and moderator dashboard, demonstrating API-based integration across multiple application components.

Workforce & Employment Analytics Dashboard

Python / SQL

- Built an interactive analytics solution using Python, SQL, Pandas, SQLite, and Plotly to analyze workforce and recruitment KPIs.

GOOGLE CLOUD TRAINING

Google Cloud Professional Bootcamp Trainee - Tuwaiq Academy

2026

- Hands-on training in cloud-native software development, Google Cloud compute, networking, IAM, containers, CI/CD, databases, observability, APIs, microservices, and event-driven architecture.
- Worked with concepts and services including Cloud Run, Compute Engine, Cloud Build, Cloud Storage, Cloud SQL, Memorystore, Cloud Trace, Error Reporting, IAM, VPC networking, and containerized application deployment.

EDUCATION & EXPERIENCE

Bachelor of Science in Computer Science - Almaarefa University

2022 - 2026

Second-Class Honors

Cooperative Training - Ministry of Human Resources and Social Development

2026

- Analyzed workforce data using Python, SQL, and Excel and developed interactive dashboards for reporting and decision support.

TECHNICAL SKILLS

Cloud & Infrastructure: Google Cloud, Cloud Run, Compute Engine, Cloud Build, Cloud Storage, Cloud SQL, Memorystore/Redis, VPC, IAM, Docker, Gunicorn

Backend & APIs: Python, Flask, FastAPI, REST APIs, API Integration, API Polling, Microservices, Event-Driven Architecture

Databases & Data: Redis, SQL, SQLite, MySQL, Pandas, NumPy, Excel, Plotly, Data Cleaning, Data Visualization

Web Development: JavaScript, React, HTML, CSS, Flutter, Dart

Dev Tools & Observability: Git, GitHub, Postman, VS Code, Cloud Trace, Error Reporting

Languages: Arabic (Native), English (Professional)
